

Linkedin Nov12, 2022 on capturing insights:

Davidek, Community, here is my/our high-level response as asked for:

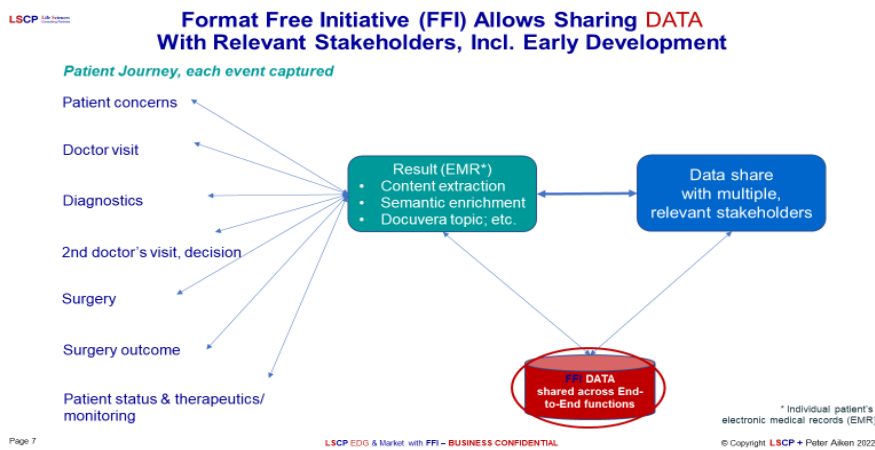

Considerations

- All Stakeholders, incl. teams facing/digital contacts with patient/provider in Digital Healthcare want the best for the Patient
- Bill Anderson, CEO Roche Pharma March 2022: *Every person's cancer is different!*
- *We also take any chronic diseases for monitoring etc.: Prevent instead of Intervene!*

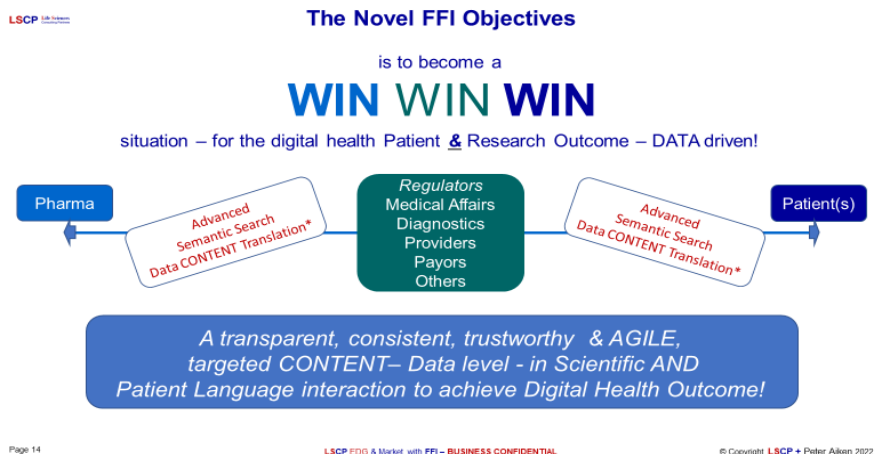

Justifiers to build an End-to-End, personalized ecosystem with the following key requirements:

- We need to
 - understand the Patient (native language) and the Providers (scientific language), and
 - translate this into actionable, semantically enriched data (content), so that Medical Affairs and R&D can make them actionable

These two visuals help illustrate what the holistic concept* calls for:

Reaching out for a beneficial End-to-End

Happy to elaborate further on the above: Davidek/Community, have I met your expectations for your high-level overview?
Ruedi Blattmann, Managing Partner LSCP & Team
